

Onshore Rig Families

OILMAN

Oilman has been dedicating himself to serve drilling contractors since its establishment in year 1999 with world-class products & professional Engineer services at competitive cost. All products supplied are machined by China both API and ISO certified workshop as per Western designs.

Tubular Handling tools: Varco/BJ, Baash-Ross, Cavins, Joy.
 Solid Control Equipments: Derrick, Swaco, Brandt, Mission, Harrisbrg
 Mud pump: C. Emsco, Gardner Denver
 Mud valve: Cameron, Demco, and WKM
 BOP Products: Cameron and Shaffer and Koomey

Rig Engineering and Rig-up Commission
 Rig Operation Engineers services and consumables local stoks & supply.
 Drilling equipments and tools R & D and supply.

DRILLING, WORKOVER EQUIPMENTS AND TOOLS

S/N PRODUCTS

Rigs & Accessories

RIG01 Land Drilling Rig
 RIG02 Self-propelled Drilling Rig
 RIG03 Workover Rig
 RIG04 Rotary Table
 RIG05 Elevator Link
 RIG06 Swivel
 RIG07 Hook
 RIG08 Traveling Block
 RIG09 Block-Hook
 RIG10 Drilling Line

MP Mud pump & Fluid End Parts

MP01 Triplex Single Acting Pump
 MP02 Light duty plunger mud pum

SC Solid Control Equipments

SC01 Shale Shaker
 SC02 Desander
 SC03 Desilter
 SC04 Centrifuge
 SC05 Centrifugal pump

HT Handling Tools

Notes:

- 1) Self-propelled workover rig is designed for both double Drum and single Drum.
- 2) The Diesel Engine could be CAT, or Detroit while Transmission is Allison.

WARRANTY

OILMAN warrants its products to be free from defects in materials and /or workmanship under normal use and services for a period of one (1) year from the date of shipment. The liability for any defects shall be limited to the repair or replacement of such products, or, at the option of OILMAN the refunding of purchase prices. This Warranty is expressly in lieu of all other warranties and representations, expressed or implied, and all other obligations or liabilities on the part of OILMAN, which shall not be liable for consequential damages for any breach of warranty. Any controversy or dispute arising out of the sale of OILMAN products shall be determined in accordance with Laws and /or regulations of P. R. Of China

REMARKS

All Trademarks, trade names & parts numbers are for identification purposes only

ROTARY TABLE (RIG04)

Main features

- Both C. Emsco and National Oilwell designs are available.
- The pinion and gear are made of alloy steel.
- The extension and its keyway of the pinion shaft all meet API Spec.
- The master Bushing is made of steel casting with API Standard square Kelly or Hexagonal Kelly as per Varco designs.
- Mechanical and electrical independent table drives can be furnished.

Order Code	RIG0401	RIG0402	RIG0403	RIG0404	RIG0405

ELEVATOR LINK (RIG05)

Weldless links are forged from a single piece of high-grade steel to provide maximum tensile strength. More weight and plus-diameter" in critical areas make these links extra strong. Short upper eye design means better balance and easier elevator handling, while reducing wear of the eye section against the swivel bail or body.

SW Swivel (RIG06)

Features

- The standard bails and alloy steel sub with double-pin ends
- The wash pipe and packing assembly are cartridge type and can be replaced on the floor without disconnecting the rotary hose and/or gooseneck.
- The gooseneck is provided with an outlet for wire line logging.
- Offer 4" hose connector conforms to API spec.
- Swivels conform to API Spec 8A and are granted to use API monogram.

HK HOOK (RIG07)

Features

- Equipped with a Hydraulic snubber assembly to protect tools joints when making up /breaking out connection.
- Equipped with the reliable safety devices on the hook.
- The high stress parts of every hook are subjected to non-destructive testing.
- The Hooks conform to API Specifications 8A and API monogram can be used.

Traveling Block (RIG08) TB Series

FEATURES

- The wire line is kept taut when hoisting or lowering down the unload Block.
- The Sheave grooves are hardened by medium frequency induction to provide extended services life.
- Equipped with double-row conical roller bearings and each bearing are individually lubricated.
- The sheaves and bearing are interchangeable with those of corresponding crown block.
- The traveling blocks conform to API Specification 8A and API monogram can be used.

Hook Block (RIG09) HB Series

FEATURES

- Combination of traveling block and hook together reduces overall length and can help satisfy the requirements of operating top drive.
- The Hook blocks conform to API Spec 8A and API Monogram can be used.

DRILLING LINE API 9A (RIG10)

The 6 x 19 classification of wire ropes includes standard 6 strands, round strand ropes with 16 through 26 wires per strand. The 6 x 36 classification of wire ropes includes standard 6 strands, round strand ropes with 27 through 49 wires per strand. Although their operating characteristics vary, all have the same weight per foot and the same minimum breaking force, size for size.

Dia		Met area	Approx. weight	Outer rope	Min Breaking Load (KN)		
Inch	Mm	Mm ²	Kg/m	Mm	IPS	EIPS	EEIPS
9/16	14.5	100.5	0.88	1.15	129	149	165
1	26.0	323.0	2.75	2.07	399	460	506
1 1/8	29.0	401.8	3.48	2.31	503	678	636
1 3/8	35.0	585.3	5.21	2.78	743	854	
1 1/2	38.0	689.9	6.19	3.02	880	1010	
1 5/8	42.0	842.8	7.26	3.34	1020		

Features:

- Power swivel is driven by two AC Motor which driven by Variable Frequency Driving (VFD) system.
- The system is equipped with transition hoisting rings to arrange wire rope in both order and disorder on the existing traveling blocks.
- Tubular handling system is equipped with annular back-up tong and such back-up tong and inside BOP will not rotate along with elevator link.

Model	TDS-500
S/N	RIG11
Rated Drilling depth by 4 1/2" DP (ft)	22960
Rated Load KN (ton)	4500 (450)
Drilling Torque lb-ft (KN.m)	36,900 (50)
Rated Horse Power HP	400 x 2
Motor	AC type, forced air cooling
Rotating Speed RPM	0-12
Max. Break out Torque lb-ft (KN.m)	55,350 (75)
Pipe Range for Back-up tong (in)	3 1/2"~5 1/2"
Upper IBOP	6 5/8" Reg Box and Pin, 10000 PSI
Lower IBOP	6 5/8" Reg Box and pin, 10000 PSI

RIG MOTOR (RIG12)

The motors are made as per GE designs for drilling rigs operation with two series. One is the DC motor with separate excitation and series excitation; the other is the asynchronous (AC) motor with frequency control of motor speed. Its rated power can be from 220KW to 900KW.

YJ13 And YJ13A Variable Frequency Speed Regulating Asynchronous Motor
Used as mud pump, rotary Table, and Drawworks motor
Rated Horse Power: 1100 HP, 550 V, 1040A, 660 RPM, 33.5 HZ

YJ14 And YJ14A Variable Frequency Speed Regulating Asynchronous Motor
Used as Mud pump, Rotary Table and Drawworks motor
Rated Horse Power: 550 HP, 550 V, 582 A, 660RPM, 33.4 HZ

YJ19, YJ19A AND YJ19B Variable Frequency Speed Regulating Asynchronous Motor
Used Mud pump, Rotary Table and Drawworks motor
Rated Horse Power: 550 HP, 600 V, 517A, 660 RPM, 33.5HZ

YJ21 Variable Frequency Speed Regulating Asynchronous Motor
Used Mud pump, Rotary Table and Drawworks motor
Rated Horse Power: 1100 HP, 660 V, 850 A, 800 RPM, 40.5 HZ

YJ23 Variable Frequency Speed Regulating Asynchronous Motor
Used as Mud pump, Rotary Table and Drawworks motor
Rated Horse Power: 825 HP, 600 V, 714 A, 660 RPM. 33.5 HZ

YJ27 Asynchronous Traction Motor
Used as Drawworks motor
Rated Horse Power: 320 HP, 380 V, 444 A, 686 RPM.

YZ08 And YZ08A DC Motor
Used as mud pump, Rotary Table, and Drawworks motor
Rated Horse Power: 1100 HP, 750 V, 1150 A, 970 RPM,

YZ08F DC Motor
Used as mud pump, Rotary Table, and Drawworks motor
Rated Horse Power: 1100 HP, 750 V, 1150 A, 1060 RPM

YZ10 DC Motor
Used as mud pump, Rotary Table, and Drawworks motor
Rated Horse Power: 1100 HP, 750 V, 1150 A, 1060 RPM

DRILLING INSTRUMENT (RIG13)

M/C Series Drillwatch (RIG1301)

M/C series Drillwatch is designed under M/D TOTCO Technology with key components from M/D OEM plants.

The parameters include:

- Hook Load
- Rotary Torque
- Tong Torque
- Pump Pressure-
- Rotating Speed of Rotary table
- Stroke of pump
- Return mud flow
- Well Depth

XC Series (RIG1303)

XC system is designed for workover rig and truck-mounted drilling rig to record the following parameters:

- Hook Load
- Rotary Torque
- Tong Torque
- Standpipe Pressure
- Rotary Speed
- Stroke of mud pump

ROTARY HOSE (API 7K) (RIG18)

The Rotary Hoses are designed, machined and tested as per API 7K Spec and standards with details data sheet as below.

Working Pressure: 1,600 PSI, 2,000 PSI, 4,000 PSI
 Temperature: -40°C~+100°C
 API 7K
 Used for Drilling, cementing, workover operation

Working Pressure: 5,000 PSI
 Temperature : -40°~+100°
 API 7K
 Used for drilling, cementing, workover, choke and kill line.

Mud Pump Fluid end parts and Expendables

Full line fluid end parts and expendables are available for the pump of C.Emsco, National, Oilwell, Gardner, and IDECO

- Hy-Chrome Liner
- Chrome-Plated Liners
- Hardened Steel Liners
- Ceramic Liner
- Valve & Valve Rings
- Gaskets
- Snap Rings & Valve Rings
- Pistons & Piston Rubbers
- Plates
- Piston Rod And Extension Rods
- Fluid End Modules
- Crossheads And Crosshead Guides
- Hydraulic Seat Pullers
- Cylinder Heads & Vales Covers
- Threads Rings
- Liner Clamp
- Rod Clamp
- Valve Pot Cover
- Liner Cage
- Wear Plate

SLIP TYPE ELEVATORS "Y" SERIES (HT0201)

"Y" series elevators are conventional slip type elevators for handling tubing and small casing. There are 7 types ranging from 20 to 200 ton capacity and covering pipe sizes from 1.050" to 7 5/8" OD. "YC" type elevator is capable of handling dual tubing strings. All type "Y" series elevators operate with the latch lock combination for safety. The "MYC" and "YC" provide a 7" and the "HYC" a 10 1/2" of insert contact to grip your casing or tubing.

COLLAR TYPE ELEVATOR "A" SERIES (HT0202)

Center-latch elevators are for handling collar-type drill pipe, casing and tubing. All "A" type elevators are constructed in two halves of practically the same weight, providing proper balance and easier opening and closing. In open position All "A" type elevators feature latch and safety latch lock combinations.

18°Type Elevators

G SERIES (HT0203) G series elevators are similar in design and construction to the A Series, except they are bored to fit the contour of 18° type Drill pipe. They are constructed in two halves of practically the same weight for better balance, making them easier to handle, easier to latch on and take off the pipe. In open position, a G-series elevator hangs ready for closing at any point below the upset of the pipe. Safety features include guarded operating handles to help prevent accidents to operators and an extra handle at the rear of the elevator for easier, safer operation.

Air Operated Elevators

TA-150 is a center-latch elevator for handling zip groove drill collars from 4 3/4" to 11 1/2" with a capacity of 150 tons. The GG is a center-latch elevator for handling 18-degree external upset drill pipe from 4" to 5 1/2" with a rated capacity of 350 tons. The HGG handles the same pipes from 4" to 6 5/8" with a 500 ton rated capacity. The MGG is also a center-latch elevator for handling 18-degree external upset drill pipe sizes 3 1/2" to 5 1/2" with a rated capacity of 250 tons. The HYC is a slip type elevator to handle tubular from 2 7/8" thru 7 5/8" rated capacity 250 ton.

18°Type Elevator BNC Model

The BNC has a center latch elevator for handling 18° external upset drill pipe and tubing the inside surface of this elevator is induction hardened to provide maximum strength and long services.

SIDE DOOR TYPE ELEVATORS X SERIES (HT0204)

The X-Series elevators handle all sizes of collar-type tubing, drill pipe and casing. The SLX has a shielded safety latch mounted on the elevator door. The shield protects the latch from accidental opening. Both latches operate from a single handle, and then automatically re-latch when the elevator door is closed. The type SX side-door elevator, designed for handling large, collar-type casing, is a sturdier, safety-latch-equipped version of X-series elevators.

AUXILIARY ELEVATOR SJL AND SPL (HT0205)

Single-joint, center-latch elevator designed to replace unsafe rope slings for hoisting collar-type pipe into position. The SJL type enables the crew to handle pipe properly, helps to avoid damage to pipe threads and reduces the chance of accident or injury, the SPL is the same as the SJL type except that the SPL is designed for use on tapered pipe.

MPCH (HT0401)

The 37 1/2" MPCH Master Bushing is a pin drive hinged master bushing specially designed for floating and semi-submersible drilling operations. With Insert bowl No.3 and optional inserts bowl No. 1 and No. 2, the MPCH will handle tubular from 2 3/8" to 13 3/8"OD.

MSPC (HT0402)

The 20 1/2" thru 27 1/2" MSPC is a solid body pin drive Master Bushing designed for all drilling operations. The pin drive allows the Kelly bushing to ride on top of the rotary table and permits extended bowls to be used for better slip back up. With the extended API insert bowl No.3, the MSPC will handle tubular from 2 3/8" to 13 3/8".

MDSP (HT0403)

17 1/2" and 20 1/2" Medium Duty Drive Split Master Bushing is designed for shallow to medium depth service.

MSP (HT0404)

MSP 27 1/2" Split pin Drive Bushings with the standard No.3 extended API Taper is for larger rotary opening. And this allows the use of extra-long SDXL slips required for heavier loads.

Varco The Hinged Casing Spider (HCS) (HT0501) has a capacity of 500 tons and handles 9 5/8" to 20 inch casing. The HCS Hinged casing spider, without insert Bowls, will handle 18 5/8" and 20 inch casing. Three insert bowls are available, and alone or in combination, can handle the bushing's range of 9 5/8 to 16 inch diameter casing.

- Insert Bowl 6114 stacked w/6126 can handle 9 5/8 & 10 3/4 Inch OD Casing.
- Insert Bowl 6126 can handle 11 3/4 & 13 3/8 inch OD Casing
- Insert Bowl 6127 can handle 16 inch OD Casing.

The Baash-Ross 200 ton hinged casing spider will fit most casing handling operations. It can be placed on the rotary table, mounted on a platform which replaces the rotary table, or supported by cribbing, depending upon the auxiliary equipments and procedure to be followed. Spider Bushing for handling casing 9"OD and larger are equipped with a spherical diameter tapered bore. All spiders bushing to handle 8 5/8" OD casing and smaller have a tapered bore dimensionally the same as the API Standard rotary master Bushing and will accommodate any standard rotary slip.

The Cavins "Advance" Spider (HT0503) is available in five models. Model "B", "C", "C-HD", "F", and "G". All are designed for manual, compressed air, or hydraulic operation with the exception of model "G" which is available for compressed air or hydraulically operation only.

All Cavins "Advance" Spiders may be used on a rotary table with an adapter plate that fits into the square drive or pin drive master bushing, centering the spider on the rotary table. Model "B", "C", and "C-HD" spiders may be equipped with a Gate and slips which are relieved to pass parallel strings of tubing.

Model "F" offers manual, pneumatic (air) or hydraulic operation mechanisms. The Model "F" spider can handle tubular goods ranging in size from 2 3/8" OD thru 8 5/8" OD and is favored for automation in light drilling operation or for heavy workover and production rigs. The load capacity for the Model "F" spider is 400,000 lbs.

Model "G" spiders for heavy Drilling Operation, up to 700,000 pounds (350 tons) hook load capacity, The Model "G" spider will handle tubular goods ranging in size 2 3/8" thru 13 3/8" OD and is available for pneumatic (air) or hydraulic operation. Type "FCR" Full Circle slips with replaceable Type "FCI" inserts, are used for the complete range of sizes in the Model "G" spider. The long 16" gripping area plus 360 degree, 100% contact of the type "FCI" inserts, makes it the most positive pipe holding device of its kind.

CHD Spider

UC Casing Slips

Most casing strings weight and the relatively thin pipe wall make it important that the supporting slips provide full circumferential grip. The Baash-Ross type UC Slips achieves this with many narrow segments. They are hinged together to wrap around the casing and exert a more uniform pressure. With each segment carrying the same load, they automatically center the casing string within the bushing or spider.

The UC-3 has a 3" Taper, with changes in the number of segments and liners, it will handle strings from 7" OD to 42"OD. Liners are in place by a liner retainer key and cotter pin.

**FIG. 1
Type UC-3
Casing Slips**

Type UC-4 casing slips have a 4" taper

Type C spider

TUBING SPIDER (TS) (HT06)

TS-50 is designed for 50 ton load capacity to handle 1.315 inch thru 3 1/2 inch OD tubing while TS-100 is designed for 100 ton load capacity to handle 2 3/8 inch thru 3 1/2 inch OD Tubing.

CASING ELEVATOR /SPIDER (HT07)

Slip action is controlled by a conveniently positioned pneumatic control valve, or in the case of the 200-ton tools, by simple manual operation. All pneumatically controlled units operated by utilizing the rig air supply. For maximum crew safety, the system may be manually operated if rig air pressure is temporarily lost. Further safety is insured by a positive locking mechanism, which locks slips in the set position.

MT SERIES MANUAL TONG (HT08) are offered in torque ranges from the lightweight small 16,000 lb-ft "SLF" to the larger and more rugged 100,000 lb-ft "SDD" and are completely interchangeable with other major manufacturer's tongs (Varco BJ, Woolley, National Oilwell). Each tong features tough, heavy-duty designs with heat-treated hinge pins and long-lasting "stagger tooth" tong dies (Blue Diamond, Pyramid)

Power Drill pipe Tong (PDT Seris power) (HT0901)

Hydraulically powered PDT series power drill pipe tong makes up and breaks out drill pipe tools joints and drill collar from 2 3/8 inch up to 8 inch with max 100,000 lb-ft make-up torques. PDT has a long reach. PDT is designed to move on rails attached to the rig floor. Proper length and location of rails keeps the spinning and torque wrench carriage clear of drill pipe elevator operations. It also provides sufficient travel to cross over the rotary table and make mousehole connections. Two designs for traveling cylinder. One is air driven for quicker movement while hydraulically driven one keeps the movement smooth and safer. Hydraulically adjustable system has a 6-foot vertical travel range, so it can locate at the exact tool joint height. Two designs for power supply. One is for the working temperature less than 45 centigrade while second designs with wind-cooling system on is for the temperature above 45 Degree. Diesel driven power supply is also available as per Customer requirements.

Lifting cylinder

Accessory to Drill pipe tong for pipe from 2 7/8 thru 9 1/2 inch with 600-1972 lb-ft torque range.

AIR SAFETY SPINNING WRENCH (SSW) (HT14) is designed and manufactured under Varco SSW-10 and SSW-40.

Safety Spinning Wrench is a pneumatically powered tool for spinning drill pipe, and drill collar up to 10 inch OD. Using the proven principle of frictional drive contact, the spinning wrench can spin drill pipe (drill collar) in or out quickly and efficiently without damage to expensive drill pipe and drill collar without the hazards of the dangerous spinning chain.

Model	Size of pipe (Inches)	Air pressure (PSI)	Rated power (HP)	Spinning Speed (RPM)	Spinning torque (lb-ft)	Braking Torque (lb-ft)
SSW10	3 1/2~ 5 1/2	72~130	12	90~56	465~738	929~1475
SSW40	3 1/2~10	72~130	16	108~38	403~922	806~1844

HYDRAULIC CATHEAD (HC) (HT16) is designed as associate tools to manual tong to breakout and make-up drill pipe.

Rated pull (US ton)	17.6	11.0	8.8	5.5

KELLY SPINNER (KS) (HT17) is designed and manufactured under Varco 6600 (Pneumatic Kelly Spinner) and 6800 (Hydraulic Kelly Spinner) designs, which is used for rotating drill pipe slowly, for limited rathole and mousehole drilling, and for making fast Kelly connections. This unit is completely reversible, the driller can spin out, as well as spin in, and when making connections, therefore, spinning chains are not required any more.

ACCESSORIES TO ACCUMULATOR

QYB40-60L Air pump

JYS21-25 Regulating Valve

34ZS21-25 3-position 4-Way valve

KB16 Air H-P Testing Pump

QB21-80 Tri-plunger pump

CHOKE AND KILL MANIFOLD SYSTEM (BOP04) API 16C

Floor Manifolds

Choke and kill manifolds and its accessories are designed, machined and tested as per API 6A and API 16C Standards with the following features:

CHOKE VALVE(BOP07)

- No elastomer seals used in valves
- Shut-off pipelines at emergency by utilization of holed-disc choke valves.
- With pressure buffer tubes
- Sufficient thru-bore up to 4 1/16 inch.
- Working pressure up to 20,000 PSI
- Solid manifold available for offshore

Adjustable Choke valve

Features:

- Convertibility: Positive Chokes can be converted readily to adjustable chokes by replacement of interchangeable bonnet and trims.
- Hardened stem and seat to withstand most erosive effects of highly abrasive materials
- Metal to metal seals between body and bonnet.
- Quick change connections for easy field maintenance

Holed-Disc type Choke valve

- Size: 1 thru 7 1/16"
- Working pressure up to 15,000 PSI
- Temp: -59°~ + 177°
- Trim: AA, BB, CC, DD, EE, FF, HH
- Operator: Manual, Hydraulic, Air, or electrical actuator

GATE VALVE (BOP08)

Hydraulic Gate valve without manual override

Hydraulic Gate valve with manual override

Hydraulic adjustable choke valve

Available

- Size 2 1/16" thru 4 1/16"
- Working Pressure: 3,000 thru 15,000 PSI- Temp: -60°C to 121°C (K, U)
- Trim: AA thru FF
- PSL: 3 thru 4
- PR: 1 thru 2

Features:

- Rising stem is pressure balanced by a tail rod to prevent a fluid lock from forming in valve cavity.
- Less than 1,500 PSI Hydraulic pressures will operate the valve, even under the most adverse conditions.
- Piston stops against cylinder head or bonnet, so there is never excessive stress in the stem or the gate.
- Handwheel operated manual override can be used to close the valve if hydraulic power is override lost, or to lock the valve in closed position. It cannot be used to open the valve.
- The manual override can be operated with full working pressure in the line and can be added or remove while the valve is in service

Gate valve (Manual or actuator)

Features:

- Forged body and bonnet
- Bi-directional design.
- Gate to seat, seat to body, bonnet seal and stem backseat are metal to metal sealing
- Pressure balancing stem significantly reduces operating torque
- Stem packing replaceable under full line pressure when valve is in closed position
- One piece gate
- Grease fitting in bonnet for easy lubrication

CHECK VALVE

Features:

- Top entry for easy access to internal parts
- Long wearing internal parts available for regular and S.O.G service.
- Only three low cost internal parts which are easily replaced in the line
- Single directional check valve

Available

- Size: 2 1/16" thru 4 1/16"
- Working pressure: 3,000 PSI thru 20,000 PSI
- Temp: - 60°C to 121°C (K,U)
- Trim: AA thru FF- PSL: 1 thru 4
- PR: 1 thru 2

Gate valve (Manual or actuator)

Available

- Size: 2-1/16" thru 4-1/16"
- Working Pressure: 2,000 thru 5,000 psi
- Temp: - 60°C to 121°C (K,U)
- Trim: AA thru FF- PSL: 1 thru 4
- PR: 1 thru 2

Available

- Size: 2-1/16" thru 4-1/16"
- Working Pressure: 2,000 thru 15,000 PSI
- Temp: - 60°C to 121°C (K, U)
- Trim: AA thru FF
- PSL: 3 thru 4
- PR: 1 thru 2

INSIDE BOP (BOP09)

KELLY COCK (BOP0901)

OD: 4 3/4, 5 5/16, 6 5/8, 7, 7 1/4, 7 3/4, 8 inch.
The body is made of a single piece of forged AISI 4145 H modified alloy steel, full treated to 285-341 Brinell Hardness and 40 ft-lb

Arrow Type Check Valve (BOP0902)

is used to be installed between drill stem and bit to prevent drilling fluid backflow from the bottom.

FLOAT VALVE (BOP0903) is

installed in a standard bore-back of the bit sub, to provide fluid flow control at the bottom of the drill stem.

INSIDE BOP (BOP0904)

It is a heavy-duty drop check valve with up to 10,000-PSI WP.
OD 3 3/8 thru 9 1/2 inch

VACUUM DEGASSER (BOP11)

- Overall dimensions: 2.45m2.45m×6.85m
- Maximum working pressure: 1.5MPa (superior to foreign products of its same kind)
- Temperature for media:100°- Content of H2S gas inside the media:≤100ppm
- Volume: 6 m3
- Treatment capacity: 8000 m3/d

LIQUID-GAS SEPARATOR(BOP10)

- Treatment capacity: 4 m³/min
- Vacuum tightness: 400-530 mmHg
- Drive ratio: 1.67
- Vacuum pump power: 3KW
- Major electric motor power: 15KW
- Rotation speed: 876 r/min

DRILL COLLAR (DHT02)

The Drill Collars are made of AISI 4145 H or 4145 H Modified alloy steel. Its bore are trepanned from one direction with no mismatch. All drill collars are heat-treated with hardness within 285 to 341 BHN, which are guaranteed one inch below the surface of the pipe.

When order, pls specify:

- Type (slick or spiral grooved)
- Outside and inside diameters and overall length
- Connection size and type
- API Stress relief groove on pin and box ends
- Cast or pressed steel thread protectors
- Elevator recess or not
- Hard-banding or not
- Non-magnetic or not.

STABILIZER(DHT04)

Integral spiral type

The Integral spiral stabilizers are made from AISI 4145 H Modified alloy steel or Non-magnetic alloy steel, the pressed button type or applied tungsten carbide hard faced on the blade.

Four designs are available as below:

- 1) Integral spiral stabilizer
- 2) Integral straight rib stabilizer
- 3) Interchangeable sleeve stabilizer

Sleeve type

- 1) Integral spiral stabilizer
- 2) Integral straight rib stabilizer
- 3) Interchangeable sleeve stabilizer
- 4) Sleeve stabilizer

Standard size of Integral spiral stabilizer

Interchangeable sleeve stabilizers are made of 4145 H Alloy steel, heat-treated to 285-341 Brinell Hardness and 54 Joules minimum impact value. All physical properties would be guaranteed 1" under the surface. The stabilizer is constructed of two pieces, which are jointed, by the center mandrel and one sleeve.

HOLE OPENER (DHT06)

BZ Fixed Diameters hole openers are made of tough treaded allow steel for maximum strength. Cutter arms are hard faced and welded on body, equipped with removable cutters. Cutters are available in three types.

- Type SM is for soft to medium formations.
- Type MH for medium to hard formation
- Type XH for hard formation.

The hole openers have three or six jet tubes with replaceable nozzles, so that jets streams quickly clean the enlarged hole.

REAMER (DHT07)

The rotary reamer is designed for every reaming operation but particularly for stabilization purposes when drilling in very abrasive formations. This is a versatile tool. It will fit hole sizes ranging from 4-5/8" to 26". In addition, each body, by simple adjustment of blocks and proper selection of cutters, will suit a wide range of hole sizes.

Its body is made of modified alloy steel, fully heat treated to 285-341 Brinell hardness and 54J minimum impact strength. Connections are cold rolled, phosphated, coated and equipped with protectors and are gagged to API Standards. Its body is inspected on an ultrasonic control unit over its full length and section. The original cutter and block assembly allows easy replacement of cutters by rig crews.
